Executive Summary

High school graduation rates are vital indicators of the success of various school improvement programs and of education reform efforts in general. The purpose of this study is to examine the proportion of students within the cohort class of 2000 who completed Arizona high school graduation requirements within five years. The cohort class of 2000 is comprised of students who entered ninth grade in the fall of the 1996-1997 school year and graduated from twelfth grade by the end of the 2000-2001 school year.

This report provides information about the number and proportion of students who fell into one of the following categories after their fourth year of high school: dropped out/status unknown¹, or remained enrolled for a fifth year of high school. It also includes the proportion of students that obtained a General Educational Development certificate (GED)² within five years and a subsequent fifth year graduation rate, which is calculated using the number of students who graduated within five years as a proportion of the cohort membership. Herein, these rates are summarized at the state level, by gender and ethnicity, by county, and by district and school.

* * * * *

This report is based on a longitudinal study for which student enrollment and transfer activity were tracked over a five year period to determine the proportion of students that entered high school in the 1996-1997 school year and graduated within five years (by the spring of 2001). This longitudinal method provides information about a particular cohort of students as it progresses through high school. **Please note: graduation statistics for the cohort class of 2000 have changed from those previously released by the Department of Education due to changes in the submission status of some schools. New data have been collected and some existing data have been changed in order to accommodate obtaining new information about students in this class.**

The cohort class of 2000 had a membership of 57,206 and was comprised of five distinct ethnic groups. White students made up the largest proportion of the cohort at 57.9% and Asian students the smallest, making up 2.1% of the cohort population. (see Figure 1)

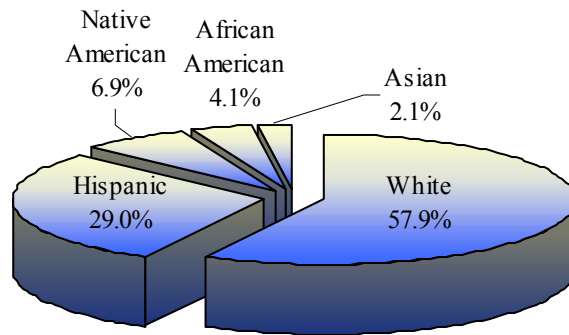

A brief overview of the cohort class of 2000 shows that:

- it had a total membership of 57,206 students
- 73.6 % graduated in five years**
- 71.4% graduated in four years
- 6.9% enrolled in a 5th year of high school and
- 0.4% received a GED (high school equivalency certificate)

¹ The dropout rates discussed within this report are four year dropout rates specific to the cohort class of 2001. They are not comparable to the annual dropout rates calculated in the Annual Dropout Rate Study.

² For this study, those students who left school and earned a GED are not counted as graduates.

Figure 1: Cohort Membership by Ethnic Group

Data presented in this report show a wide gender gap in the five year graduation rates for this cohort: more than 77% of the females received high school diplomas, while 70% of the males graduated.

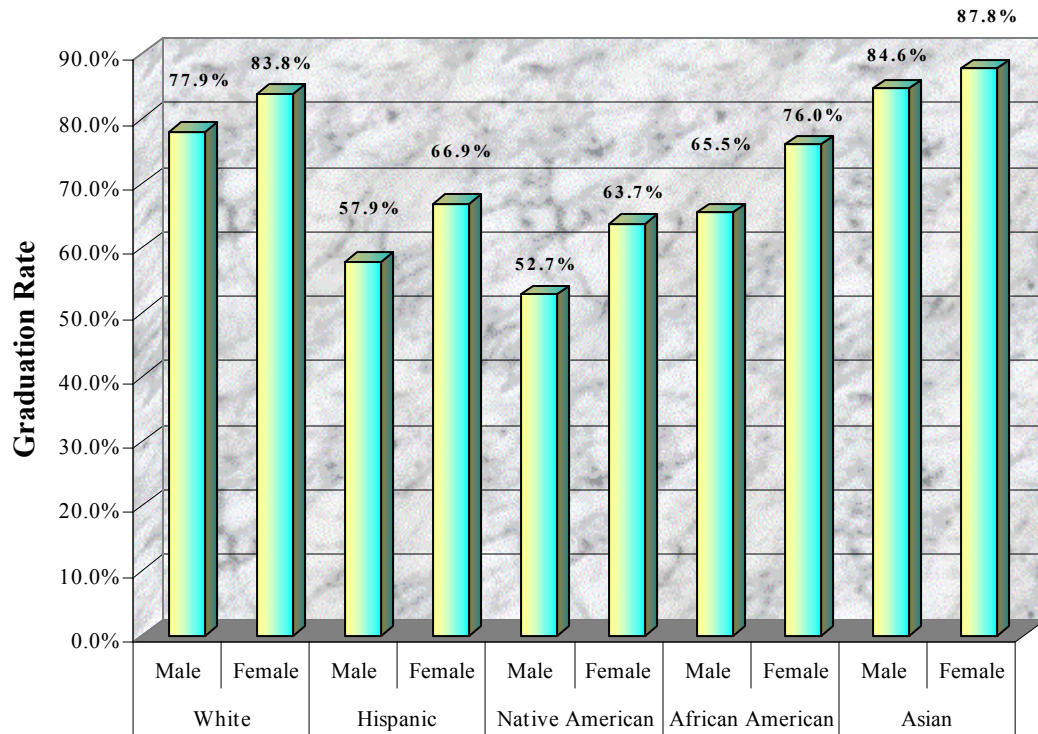

In addition to gender differences found in this study, there is a wide gap in the graduation rates of different ethnic groups. Hispanic and Native American students showed consistently low graduation rates, 62.4% and 58.3%, respectively, while White and Asian rates were much higher at nearly 81% and 86%, respectively.

Further analysis of graduation rates shows that differences found in gender and ethnic groups compound to reveal even larger gender gaps within certain groups. Hispanic and African American females graduated at rates that were about 10% above that of the males in each ethnic group. Native American females graduated at a rate 11% above the male graduation rate, the largest within ethnic group difference. (see Figure 2)

The most telling statistics in the current report are the differences between the four and five year graduation rates within each ethnic group. The largest gender difference within an ethnic group is seen in Hispanic males: 54% graduated in four years while over 58% earned a diploma in five, a difference of 4%. Similar increases are seen with Asian males and African American females: the fifth year rates increased by 3% each when compared to their four year rates.

The Arizona Department of Education (ADE) is committed to continued improvement of educational indicators by making the most accurate data available to policy makers and the public. As the state has moved to a standards based educational system and away from a “seat time” approach to graduation, five year graduation rates will continue to be used to measure the proportion of students who meet the standards.

Figure 2: Five Year Graduation Rates by Ethnic Group and Gender

Graduation Rate by District and School

Data for schools and districts are provided in the table below. These data represent those schools that had membership for the cohort class of 2000 in any given year. Schools that did not offer a high school diploma or did not, at any point, serve students who were members of the class of 2000, were not required to submit data for this report. Charter facilities have been marked with a X symbol. **Note: the four year dropout rates presented in the following results are specific to the cohort class of 2000 and cannot be compared to the annual dropout rates calculated in the Annual Dropout Rate Study.**
